PROFESSIONAL EXPERIENCE

Unify Apps

Toronto, ON

Software Development Engineer (SDE)

February 2025-Present

- Refactored core Java services to adopt asynchronous programming models and offload computation heavy tasks to underutilized Kubernetes managed microservices via Kafka, improving throughput and responsiveness during peak usage.
- Built scalable REST APIs to generate Excel files (1M+ rows) in under 5 minutes - achieving 30x faster generation.
- Migrated in-memory services to streaming-based pipelines, enabling scalable file handling and reducing file processing time by ~60% through lowering memory usage and system strain.
- Utilized Redis/Mongo-backed session management for dynamic user-session handling with custom attributes for flexible client-specific access control.
- Authored JUnit tests with Quarkus and Spring Boot to maintain high test coverage and prevent regressions during rollouts.

Lassonde

North York, ON

Back-End Developer (Contract)

January-August 2023

- Developed a comprehensive Django web app to allow clients to efficiently manage over 40GB of project inventory, students, and supervisor's data through intuitive CRUD operations.
- Designed the initial SQL database schema – tables, columns, and relationships – to support scalable and normalized storage of project inventory, student records, and supervisor profiles.
- Implemented advanced filtering and search functionalities to streamline project discovery and organization resulting in a reduction of inventory-assessment turnaround of nearly 60%.

Amazon (AWS)

Vancouver, BC

Software Development Engineer (SDE) Intern

May-August 2022

- Developed an internal tool utilizing AWS Lambda, Glue, Spark, SNS, and Athena/SQL to aggregate cross-account data into an S3 data lake, enabling queries on datasets over 100GB of data within minutes.
- Reduced data query time by ~50%, leading to improved data-driven decisions and operational efficiency.
- Created an AWS CDK codebase in TypeScript and Python to automate trigger and crawler setup in users' accounts, reducing turnaround deployment by 80%.
- Authored Jest unit and integration tests using mocks to validate logic and safeguard against regressions in deployments.

CaseWare International

Toronto, ON

Front-End Developer Intern

May-December 2021

- Redesigned existing classes to prevent memory leaks, resulting in 10% lower memory usage and a more responsive UI.
- Collaborated with backend in creating APIs for new features, designing database interactions to persist form history and display versions and other insights using JavaScript and TypeScript.
- Supported international development partners with 1-1 calls, walk-throughs, and best development practices.

TECHNICAL LEADERSHIP

Unify Apps:

- Mentored interns on code structure and Git workflows to ensure high-quality contributions in an Agile environment.
- Led client demos and debugged issues live, delivering quick resolutions and strengthening client relationships.
- Authored internal documentation across services, covering codebase architecture, GitHub conventions, and debugging, streamlining dev onboarding, consistency, and response efficiency.

EDUCATION

Bachelor of Engineering, Specializing in Software Engineering – Big Data

2017-2023

York University

GPA: 3.5 (4.0 scale)

TECHNICAL SKILLS & PROJECTS

Programming Languages: Java, Python, JavaScript/TypeScript, C#, Groovy, HTML/CSS

Tools: Git, AWS, SQL, MongoDB, Redis, Pandas, Spark, Kubernetes, Kafka

Frameworks: Angular, Spring Boot, Django, React, Quarkus

Projects:

- *Smart Budgeting Tool:* An Angular web app to simplify personal finance management by automating calculations, grouping expenses, and offering a more user-friendly UI. Demo: satinder-sikand.github.io/personal-finance-tracker/.
